PROJECT: **CARO**		
Computer Science 2 Project	**Team Members:**	Chavero, Zach Adriell T.
Group Progress Report		Salorio, Lilianne Mhiles
4th Quarter		
Weeks 1-2 (Mar 2 to Mar 13)		

GOAL State your goal for the Week	**DATA COLLECTED** State/list the data collected relevant to your project	**PROGRESS** State the progress you have made so far by the end of the week
Understand *front end and back end technology.*		Installed the needed apps (*such as Flask*) for the development of our program's front-end. Also started making the folders and the Index file.
learn how to implement front-end tech into our program.		

STRENGTHS

We were able to experience making our own simple app rendered on a browser (*Flask Calculator activity on March 11*), letting us have a peek of what the process of rendering **CARO** into a functioning app would look like. This activity will serve as one of the basis of our front-end tech. So far, our basic understanding of the topic is one of our strengths. Not really to a high level, but progress is still progress.

AREAS FOR DEVELOPMENT

Though we do have the right resources, we still do get confused on the actual making of front-end parts. Namely, writing the *HTML* and other files. This is still a pretty big work in progress. (Especially for *Lilianne* even though majority of the main basic code is hers =( )

STRATEGY FOR SUCCESS

This week is all about focusing on how the *front end and back end* interact with eachother, so it's also mostly about using our current resources to the best of it. Maximizing our knowledge with available resources means indulging ourselves in lectures at school, studying the learning guides, and even searching on the web to enhance what we understand so far. That is our strategy for this week.

PROJECT: **CARO**		
Computer Science 2 Project	**Team Members:**	Chavero, Zach Adriell T.
Group Progress Report		Salorio, Lilianne Mhiles
4th Quarter		
Weeks 3-4 (Mar 16 to Mar 27)		
GOAL State your goal for the Week	**DATA COLLECTED** State/list the data collected relevant to your project	**PROGRESS** State the progress you have made so far by the end of the week
Make the templates folder:		
Make the Index file.. (homepage)	**https://getbootstrap.com/docs/4.1/getting-started/introduction/** **https://flask.palletsprojects.com/en/stable/** **https://docs.python.org/3/library/json.html**	Succesfully wrote the Index file, having it function well during the rendering. Make *HTML* for the add task function...		Successfully made the Add Task work! *(You are so goated Zach)* 	here's a cool demo, actually >>>>>>	 Also made a JSON save feature to save progress!

		Also made a JSON file.

STRENGTHS
One of the biggest strengths this week is the functioning homepage and our current pace in developing the front-end of the program. It may not be very fancy yet, but fancy-fication is week 5-7's problem!
AREAS FOR DEVELOPMENT
Though having finished the main thing- namely the *homepage*, we still have to develop the *UI* for other functions, such as E*diting a Task* and the pop-up that appears when D*eleting a Task*. Also we may have to adjust the display of the homepage ASAP to reduce clutter and make the testing cleaner.
STRATEGY FOR SUCCESS
Our strategy for success for this week is to focus on building the *basic structure* one at a time, like how one of our focuses this week was the *Add Task function*. Also, we have to test it constantly to make sure functionality is consistent... Again, we have to worry about the big parts first like the *HTML* for each function of the program and worry about making them aesthetic later. Another thing- *consume more tutorials..*

PROJECT: **CARO**		
Computer Science 2 Project	**Team Members:**	Chavero, Zach Adriell T.
Group Progress Report		Salorio, Lilianne Mhiles
4th Quarter		
Weeks 5-6 (Mar 30 to Mar 31)		
GOAL State your goal for the Week	**DATA COLLECTED** State/list the data collected relevant to your project	**PROGRESS** State the progress you have made so far by the end of the week
		Finished the edit task element and polished the task list (from week 4)
Make the HTML for the Schedule LIst function	https://getbootstrap.com/docs/4.1/getting-started/introduction/	
Formatting	(The link above is our basis for the rest of the goals below!)	finished formatting the task and schedule!
Format Task List..!		
Format Schedule List		
Sketch the final overall visual of the program..!		We were struggling with the default color palette.. but finally decided on a format!

STRENGTHS
We currently have a lot of options for formatting and for the overall aesthetic of the program. As we're done with the hard parts (setting up the basic structure of the HTMLs..), we're left with just polishing!
AREAS FOR DEVELOPMENT
To be completely honest, although we've accomplished our goals for the week, we're still debating amongst ourselves on what the final formatting should look like. Also we really need to work on our color schemes because they look very depressing.. which is bad for our program, because it's supposed to be somewhat motivational.. Aside from that, we also have to work on transitions like fade-ins and outs.
STRATEGY FOR SUCCESS
Our strategy for this week is to consume as much tutorials as possible on formatting and take inspiration from other good websites/programs (Such as existing social media platforms.).. We are currently going back and forth on design and that's part of the strategy- communicating on what's best for the program.

PROJECT: **CARO**		
Computer Science 2 Project	**Team Members:**	Chavero, Zach Adriell T.
Group Progress Report		Salorio, Lilianne Mhiles
4th Quarter		
Weeks 5-6 (Apr 6 to Apr 7)		
GOAL State your goal for the Week	**DATA COLLECTED** State/list the data collected relevant to your project	**PROGRESS** State the progress you have made so far by the end of the week
Fancy-fication (and polishing..) !!!!!		
Edit the logo and implement it into the homepage		Finished the logo and inserted into the homepage and navbar! 
Decide on color themes and add a change homepage theme option	Credits to Coolers <3 (A color generator app) /(Ill add images later :() 	Implemented 2 themes so far (excluding the default blue theme), currently working on the rest. 		this is the contrast theme!! ^^^^

STRENGTHS

Our project is about 90 % complete, the remaining 10% being only about aesthetics and user preferences. Our strength for this week is the smooth sailing progress, since we're left to focus on visuals, which is the easier part of the program.. haha.. Also we found a very good website for helping us with color palettes!

AREAS FOR DEVELOPMENT

Some themes are a bit hard to look at in terms of color harmony. The default theme isn't much of a problem, but deciding how we should format the rest of the palette is a little inconvenience. It doesn't affect the program that much though, since it's only a visual addition.

STRATEGY FOR SUCCESS

Our strategy for this week is to take as much advantage as possible from the internet! Color palette generators, tutorials on how to make a program look aesthetically pleasing, taking a look at others' work for inspiration, etc. As we're nearing the completion of our program, we're left to enjoy (?) the process of designing, worrying less about the back-end part of the program..
